FreshConnect Instructions

To use FreshConnect you will need a client id and api key. These can be generated in LiveIQ by your Franchise owner

Note: Generating a key will invalidate any previously generated keys

These credentials are used to authenticate your requests to FreshConnect. The credentials need to be included as HTTP headers in every request

The headers are called api-client and api-key

For example to query the report Format_1_1_Daily for restaurant 11111 for 10th June 2023 you would use the following request

Sample request

```
GET: /SalesSummary/11111/startDate/2023-06-10/endDate/2023-06-16

Headers

api-client: 51d9612e-f8c7-4151-818b-a976cac8db89
api-key: IfjL_8WJN9+Gkj-;_Z7MmFx&9M]LE*1=pMBKvAqO
Accept: text/json
```

Sample response

```
STATUS: 200 OK

{
    "startDate": "2024-01-01T00:00:00",
    "endDate": "2024-01-04T00:00:00",
    "data": [
           {
                  "resturantNumber": "11111",
                  "netSales": 790.9,
                  "tax": 217.03,
                  "units": 89,
                  "transactions": 55,
                  "cashCardTotal": 0,
                  "thirdPartySales": 571.39,
                  "thirdPartyTransactions": 43,
                  "hoursWorked": 214.46
           }
    ]
}
```

Query multiple restaurants

You can query for multiple restaurants by providing a comma delimited list. e.g. the following will query restaurants 11111 and 22222

/SalesSummary/11111,22222/startDate/2023-06-10/endDate/2023-06-16

Each report endpoint has a limit on the number of restaurants and the date range that can be queried in each call

These are shown for each report URL

Error responses

```
STATUS: 401 Unauthorized
```

You have not provided a valid api-client or api-key. These must be included as http headers. If you have lost your credentials, you can generate new ones with the button above.

```
STATUS: 403 Forbidden
```

You have requested data for a restaurant you do not have access to. Check the restaurant number in the url. If you have only recently gained access
to this restaurant it can take up to 24 hours for this to be reflected in the API.

```
STATUS: 429 Too Many Requests

{
    "error": "You have made too many requests, please try again tomorrow"
}
```

There is a daily limit to the number of times you can call the API. This resets at midnight UTC.

```
STATUS: 400 Bad Request

{
    "error": "This request only allows a date range of 50 days per call"
}
```

You have requested a date range too long for this report endpoint.

```
STATUS: 400 Bad Request

{
    "error": "This request only allows 20 resturants per call"
}
```

You have provided too many restaurants for this report endpoint.

```
STATUS: 404 Not found
```

Double check your URL. Is the report name correct and have you included both a store number and a date?

```
STATUS: 400 Bad Request

{
    "message": "The request is invalid.",
    "modelState": {
           "endDate": [
                  "The value '2024-01-02v' is not valid for DateTime."
           ]
    }
}
```

The parameters you have provided are invalid. Double check you date format is correct and represents a valid date.

Curl examples

You can use the following commands to test calling the API in Windows or Linux. Just copy the command to a text editor and replace the sample client id and
API key with your own. Replace the store number 11111 with a store that you have access to and then run the command in Powershell on Windows or the terminal in Linux

You can query for multiple restaurants by providing a comma delimited list. e.g. the following will query restaurants 11111 and 22222

Each report endpoint has a limit on the number of restaurants and the date range that can be queried in each call

These are shown for each report URL

Linux:

```
curl --header 'Accept: application/json' --header 'api-client: 51d9612e-f8c7-
4151-818b-a976cac8db89' --header 'api-key: IfjL_8WJN9+Gkj-
;_Z7MmFx&9M]LE*1=pMBKvAqO' '/Format_1_1_Daily/11111/2023-06-10'
```

Windows Powershell:

```
curl /Format_1_1_Daily/11111/2023-06-10 -Headers @@{ Accept =
'application/json'; 'api-client' = '51d9612e-f8c7-4151-818b-a976cac8db89';
'api-key' = 'IfjL_8WJN9+Gkj-;_Z7MmFx&9M]LE*1=pMBKvAqO' }
```
